

FREQUENCY FORTRESS

TRUST STRUCTURE OVERVIEW – PHASE I

Document ref: FF-TRUST-001

Document version: 2.0

Issued and effective date: 22 September 2026

PURPOSE AND STATUS

This document outlines Frequency Fortress's proposed legal and ownership structure, to be developed as resources permit through the formalisation process below. It is intended to support legal protection, lawful tax efficiency, spiritual integrity and operational transparency as the mission scales. It describes the bridge model and proposed structure without assuring any particular protection, tax outcome or legal form.

This is not a trust deed, company constitution, charity registration, tax ruling or appointment. The final structure will be selected after reviewing the mission's actual functions, jurisdictions, assets, private benefits, commercial activity, banking and custody needs.

1. PRESENT POSITION

The current recipient, bridge-period treatment and present provisioner rights are stated in the Phase I Provisioning Terms and Public Transparency Statement. No trust or entity described below is active merely because it appears in this Overview, and no provisioner becomes a trustee, beneficiary, shareholder, member or owner solely by provisioning the mission.

2. FORMALISATION TRIGGER

Formalisation work may begin whenever resources permit. The 90-day review starts automatically when cumulative accepted, unrestricted Phase I financial provision first reaches £1 million, counted when sufficiently liquid and available for lawful deployment at its reasonably recorded sterling value.

Subsequent authorised expenditure does not reduce the cumulative total. Andrew Pletnev may activate earlier by dated written record on the basis set out in the Terms. The Trigger Notice records the start date and cannot defer it. At approximately 90 days, Frequency Fortress records progress, outstanding matters and any revised timetable; this is not a guaranteed completion date.

The £500,000 legal and structural allocation in the Packet is the broad Phase I budget envelope for this work, including entities, trust or foundation work, operational security and future governance. It is not the price of one structure and is not the Formalisation Trigger.

3. PROPOSED STRUCTURAL TEMPLATE

The working design is a mission stewardship vehicle above an operating company, with an optional asset vehicle where property, financing, liability or tax treatment makes separation useful. The structure should fulfil these functions; its legal form and jurisdiction remain undecided.

Component	Proposed Role	Decision at Formalisation
Stewardship vehicle	A foundation, purpose trust or comparable vehicle in a jurisdiction that lawfully supports the mission design. It would preserve purpose, hold core intellectual property and designated mission assets, and control the operating company.	Jurisdiction, legal form, founder or settlor, council or trustees, purposes, reserved powers, succession, tax treatment and permitted benefits.

Operating company	A limited company able to contract, employ, build and operate technology, receive operating revenue, pay suppliers and meet routine liabilities.	Jurisdiction, ownership, directors, capital, banking, accounting, tax, licences and agreement with the stewardship vehicle.
Mission asset vehicle	An optional subsidiary or special-purpose owner for the Citadel, Charger or other risk-bearing assets if separate ownership is useful.	Whether separation is needed; ownership, financing, use, insurance, tax, maintenance, disposal and proceeds.
Treasury and custody	Accounts and wallets held or controlled by the appropriate structure, with documented authority, recovery and transaction records.	Banks, exchanges, wallet design, signers, limits, backup, valuation, reconciliation and reporting.

4. FOUNDER DIRECTION AND ACCOUNTABLE CONTROL

Andrew Pletnev is intended to retain his equivalent role as Founder, Commander and Mission Architect. If a trust is adopted, he intends to serve as a founding trustee, subject to lawful appointment. The final documents should preserve defined founder authority over mission doctrine, identity, core intellectual property, senior appointments, change of purpose and disposal of protected mission assets, so far as the chosen law and each office-holder's duties permit. No trustee appointment presently exists.

Founder authority must be expressed through lawful reserved powers, appointments, contracts and constitutional rights. Independent trustees or directors may be used for conflict resolution, regulated matters and transactions involving Founder benefit. The structure should authorise and record reasonable stipends, remuneration, expenses, accommodation, travel, recovery support and mission-asset use where they serve the mission and the selected form permits them.

5. RECEIPTS, ASSETS AND OPERATIONAL FLOWS

- After activation, new provision will be routed to the legal recipient identified in the current documents.
- The stewardship vehicle may hold protected assets and fund the operating company under documented budgets, grants, service agreements, capital or other lawful arrangements.
- Bridge-period resources and mission items will be reconciled and, where appropriate, transferred, assigned, reimbursed or documented under a transitional arrangement.
- Provisioner recognition remains in the Christed Vault Ledger. Provision does not by itself create ownership, membership or beneficial rights in any vehicle.

6. MAJOR ASSETS

The Citadel housing and Ceremonial vehicle will not be contracted for or acquired until an appropriate ownership structure exists. Before acquisition, the review will identify the legal owner, funding route, permitted mission and personal use, occupation or licence terms, insurance, tax, maintenance, conflicts, disposal and treatment of sale proceeds.

Once acquired through the formal structure, these assets are intended to be designated ceremonial mission assets, non-transferable for profit and held in long-term mission service, subject to the permitted disposal and proceeds provisions in Section 3 of the Terms. This policy will be implemented in the ownership documents; it is not an existing legal asset lock.

7. FORMALISATION DECISIONS

The review will address and record progress on jurisdiction and legal form; governing documents and founder powers; appointments; banking, custody, accounting and records; applicable tax and regulatory treatment; conflicts and Founder benefits; reconciliation of bridge-period receipts and assets; and the ownership, reporting and counterparty materials needed for institutionally compatible Phase II funding. Implementation and any religious, charitable or public-benefit classification remain subject to the selected form, actual activities and applicable requirements.

8. ACTIVATION AND RELATIONSHIP TO OTHER DOCUMENTS

A structure takes effect only once the steps required to establish it have been completed and it is identified as active in the current documentation. Until then, references to a future trust, foundation, company, treasury, trustees, directors, bank account or multi-signature wallet are plans rather than present facts.

The Phase I Provisioning Terms and Public Transparency Statement governs the present legal effect of new provision. The Material Transfer Protocol governs the transfer process. This Overview sets out the basis for structural planning and does not itself create provisioner rights or vary a transaction-specific Provisioning Confirmation.
